

Automate repetitive tasks with RPA

ROBOTIC PROCESS AUTOMATION (RPA)

in banking

WHY RPA?

To avoid frauds or before lending money, banks process thousands of surveys each month to reduce their operational risk.

However surveys take time to complete, are prone to errors and use substantial internal resources.

CHALLENGE

The banking sector is under immense pressure to boost efficiency and optimise resources.

The scarcity of skilled employees, a sudden surge in personnel costs, and the need to improve process efficiencies are some of the challenges the sector faces today.

THE SOLUTION

RPA can address all of these concerns because virtual BOTs can automate processes and help people focus on high-value activities.

It's an easy way to increase staff morale while also identifying unknown trends early on, giving you a competitive advantage.

OUR OFFER

A 2-day assessment focussing on your internal business processes (£1,200+vat per day).

BOTs can then be rented by the hour or purchased outright. As a guideline, the price of renting a BOT starts from £499/month and £5k (setup)+vat.
