

Automate repetitive tasks with RPA

# ROBOTIC PROCESS AUTOMATION

## To process claims

### CLAIMS

Companies in the legal industry are under pressure to process claims rapidly. Using traditional methods of processing, it can take up to three months to complete a personal injury case or Plevin (PPI) claim and avoid to delay the payment.

### CHALLENGE

The time it takes to process and settle each claim has a direct effect on costs for the company. Furthermore, without hiring extra staff or scaling up operations significantly, it's nearly impossible to grow in terms of both customer satisfaction and revenue generation.

### THE SOLUTION

Automating routine tasks with a virtual BOT is an efficient way for a business to free up time that would have been spent on more less interesting and creative activities.

RPA increases staff morale, allowing them to focus their attention towards other activities, identifying unknown trends early-on and generating higher value for the business.

### OUR OFFER

A 2-day assessment focussing on your internal business processes (£1,200+vat per day).

BOTs can then be rented by the hour or purchased outright. As a guideline, the price of renting a BOT starts from £499/month and £5k (setup)+vat.
